co-located with International Conference on Software Engineering
Montréal, Canada – May 28, 2019

What?

The health of software projects, software communities and software ecosystems encompasses many technical, social, legal and business aspects related to success, longevity, growth, resilience, survival, diversity, sustainability, popularity, inclusiveness …

Who?

Open Source Community Members, Industry and Academia

Why?

- Raise awareness of software health
- Present tools, methods, practical experiences
- Advance body of knowledge on software health

Are you active in software projects or ecosystems, and have something to say about software health?

Submit a talk proposal on
- experiences from individual, team or community level, as well as in organizations or the public sector
- examples of how software health impacted social, technical, legal, process and business
- software health tools and dashboards to enable assessment at the project or ecosystem level, and how they have been used.

Submission deadline: 15/02/2019
- title + abstract (max 500 words) + presenter bio
